METALLOGRAPH® PRINTING SERVICE

At SPF-Inc we recognize that evaluation requires actual samples relevant to the application.

For this purpose, we have on hand suitable printing capability and supplies.

Our primary printer is a Zebra 300 dpi and nominally 4 inches (10 cm) wide.

On special request 600 dpi printing can be arranged.

Stock demonstration samples:

We maintain a number of different samples on various substrates

- preprinted UHF antennas
- conductivity test prints

These can be mailed out promptly on request. And in the future, we plan to have actual tags with chips attached.

Custom demonstration samples

Customers have different requirements for comparative testing. We have printed, for example, antenna with different chip mounts, different antennas, and circuitry. This is a no charge service. Please provide an Illustrator or PDF file to scale (see instructions below).

We will preview and prepare the print file, then print.

Samples will be shipped via first class mail.

For faster delivery please provide your preferred shipper and account information.

Available substrates: 2 mil white polyester label stock – not die cut.
4 mil Clear PET
Glossy paper thermal transfer label stock
*Inquire for others

Development and Prototype Samples

Although thermal transfer is inexpensive and relatively simple to use, there is the uncertainty and learning curve from setting up and introducing new technology. Our pay-to-print service allows our customers to have the advantage of our skills and experience immediately, so the investment and time for establishing and reducing to practice the technology is delayed until there is greater certainty.

Files: see above.

Clients using this service can be assured that their interest and information remains confidential. Non-disclosure agreements are common.

Small runs may be produced on substrate we hold in stock (see above). For larger volumes or special substrates, we purchase from competitively priced vendors. Or customer may supply. We do not yet offer die-cutting, but will procure pre-cut label stock on request.

Turnaround will typically be within 3 to 6 days of file receipt when substrate is on hand.

Fees are based on standards from the graphic arts and label industries.

We attempt to keep them reasonable.

Please contact us for details. Shipping and taxes extra. Metallograph@SPF-inc.com
